

EMERGENCY EFFICIENCY COUNCIL

**PROJECT LEADS:
DR. KEITH TANG
DR. SCOTT TANCON**

Improving flow is key to success in the Emergency Department, so the project leads decided to create an Efficiency Council. The purpose is to collect feedback from people working onsite on ways that the department could be improved. The council consists of physicians, nursing leads, and Department managers.

The council, together with various members of nursing leadership, have worked on updating and improving the trauma bay. They are also aiming to make Room 12 a primary pediatric appropriate room, and are continuing to find ways to make Zone 2 more efficient with better patient flow.

This is an ongoing project which encourages physicians to work closely with various nursing leads to bring positive changes to the department.
